RoBe of IL, Inc. Creating Innovative Ideas For the Food Industry

ANNOUNCEMENT TO THE FOOD SERVICE INDUSTRY:

For years there has been a real concern about the transfer of dangerous E-coli and bacterium and salmonella. Especially when utilizing large one piece poly cutting boards, where most foods are prepared. Over the last few years, the cutting board industry has come up with different color poly boards to be used for various food products to eliminate cross contamination. Red for beef, blue for fish, tan for cooked foods, green for fruits and vegetables, yellow for poultry, and white for dairy, etc. However, more was needed to be done.

RoBe of IL., Inc. was well aware and concerned with the above problem. Our research and development department went to work on solving the problem. Coming up with an "innovative solution," taking the cutting board industry to a "new plateau." RoBe of IL., Inc. has developed a revolutionary and unique way to connect cutting boards. By means of the RoBe sanitary connectable "cutting board system". Now two, three, or more sections of white, or a combination of white and colored boards, can be joined together, to form any kind of arrangement needed to cover sandwich, pizza prep, and s.s. work tables. Using our precision drilled custom poly cutting boards, unique connectors, suction cups and table brackets, require no tools to install.

When the RoBe sanitary connectable "cutting board system" is used many other benefits become available. Here are just a few.

1. If one or more of the connecting boards become soiled beyond safe use during prepping operation, it can easily be turned over or lifted off and replaced with a clean sanitized one, while the soiled section is being sanitized in the sink or dishwasher.
2. Any section can be replaced when worn, resulting in great monetary savings over total board replacement.
3. Being able to change a section by color for a specific product preparation without disturbing the rest of the cutting board arrangement.
4. No more large boards to handle. They are clumsy, expensive, and almost impossible to clean.
5. "All" RoBe Connectable Board Systems can be shipped in smaller packages at a fraction of the freight cost of the large one piece boards, and much less chance of damage in shipment!
6. Virtually eliminates warpage because smaller sections are utilized.

Easy to clean, reasonable shipping cost, replace only the sections you need. Choice of six colors, all connectable, reversible, and interchangeable.

Isn't it time for a change in **YOUR** operation?
We would like to help.

No More "Wet Towels" & No More "Long Cutting Boards" Needed!

All RoBe connectable cutting board systems are engineered to achieve the ultimate in sanitation and the only system to offer these innovative advantages.

1. All RoBe connectable cutting boards are elevated above the work surface, using our unique connectors and special suction cups. This exclusive RoBe system eliminates the cutting boards from laying in food juices or condensation which can cause stains and bacteria.
2. All RoBe connectable cutting boards are precision cut and drilled to customer specifications, and made of NSF approved high density polyethylene.
3. RoBe connectable cutting boards are individually wrapped for cleanliness and come in six colors to identify with the various food groups, thus reducing the risk of cross-contamination.
4. RoBe connectable cutting boards are 1/2" thick, lengths and widths up to 24" are available which will fit in most commercial sinks and dishwashers, for the ultimate in sanitation.
5. RoBe connectable cutting boards have a non-skid finish, non-absorbent, won't chip or crack and are heat resistance to 185 degrees Fahrenheit.
6. Being connectable, reversible, interchangeable gives the user 100% wear - another exclusive no one else in the food industry can offer. Other cutting board suppliers "only" offer one piece boards, just like they have been doing since poly boards were introduced.

Move up to the 21st Century and **GET CONNECTED!
With RoBe connectable cutting board systems.**

RoBe Color Identification Usage Chart

RoBe Connectable Cutting Board Systems are the easy way to separate food groups, thus reducing the risk of cross-contamination. NSF approved.

Cleaning Instructions

Use hot water, cleanser or any granular detergent along with a stiff bristle brush. The abrasive cleaning action is very important. Merely wiping or rinsing the board will not do a sufficient cleaning job. Scrub

the board thoroughly and rinse with hot water. Sanitize by immersing for one minute in a solution of chlorine bleach and water (one tablespoon of bleach per one quart of water). Be sure to rinse thoroughly after sanitizing. RoBe Connectable boards are dishwasher safe. For best results, remove from dishwasher before drying cycle begins. Store your boards in a flat or perfectly upright position.

RoBe SYSTEM III

Using:

- (2) Using CP 8/45 Clamps
- (2) Using CR 2 Connectors
- (2) Using CR 4 Connectors

"One" of many RoBe flexible cutting board arrangements.

EXAMPLE: 6' work table using (2) 24" long connectable cutting boards

Using:

- (1) CP 8/45 Clamp
- (1) CR 2 End Connector
- (1) CR 4 Center Connector
- (2) SC175 "Suction Cups"

Demonstration on how only two thirds of area is needed for food preparation. The rest is for other uses such as holding food storage containers, etc

RoBe SYSTEM Retro - Fit Kit

SC-175 suction cups can be use in place of CR-2 connectors and CP 8/45 clamps. On SS Tables, sandwich/salad prep, and most pizza prep tables. No tools required. Note: no drilling, tapping, or pins needed.
